ERGONOMICAL
Mechanically Assisted System

Skytrack Mobile.

Mechanically Assisted Compact Storage Shelving.

Introducing Novalok's popular Skytrack shelving, incorporating a mechanically assisted drive system. The Novalok Skytrack system now has an added safety option, specifically the mechanically assisted option. For high usage and heavier applications the assisted option makes operation of the rolling structure much safer, easier to roll and reduces operator fatigue. Designed to be effective in the retro fitting of existing installations; the mechanical option is a logical progression of the popular Skytrack system.

The mechanical assisted system is built with sub chassis mounts, heavy duty rollers and an enclosed positive chain drive mechanism. Very robust, simple effective design and easily installed.

The mechanically assisted Skytrack System is aesthetically good looking and takes up very little extra room compared to the standard unassisted system. Finished in White epoxy powdercoat, or alternatively Novalok is able to colour match to suit existing systems.

The Novalok assisted Skytrack system is modular, and can be easily modified. The entire range of sizes is available throughout New Zealand.

Supplied with an ergonomically moulded hand wheel with a folding spinner to make operation even easier. Simply fold the spinner away when not using to keep the whole system unobtrusive to the working and transport area and service aisles.

The Novalok assisted system is very effective in operational safety and also, realistically priced to make it an attractive and logical choice for new and existing installations.
