

# NOVALOK

ADVANCING INNOVATION

A COMPREHENSIVE RANGE OF  
**SYSTEMS**  
to meet your pallet racking  
and shelving needs.

## Pallet Racking.

### *New Zealand leading experts in heavy duty industrial pallet racking and shelving*

We provide racking for every storage requirement, whether in a mixed product warehouse where many product varieties are stored, or in bulk environments where storage of large tonnages of a limited product is required.

Novalok has designed and developed a comprehensive range of interlinking and related racking systems that cover virtually every bulk storage requirement. We can also design racking to fit any known configuration and to fit any available space. These systems provide great value for customers needing to store heavy items on forklift accessible racking. Among the many options that Novalok have to offer, there will be a racking solution that meets your needs.

Novalok Storage Systems market both the Victor teardrop and Novarack Speedlock ranges. The new Victor 'bolt together' frames are 100% compatible with our original Victor products.

*Novalok offer racking inspections and audit reports in New Zealand.*

Our engineering team will assist you with the documentation process to enable your organisation's racking project to be 'Certified' as compliant with the relevant standards. Our products are built to exacting quality and safety standards, and seismic ratings. Furthermore Novalok warrants you that our products will meet required installation and manufacturing standards subject to proper use and operation within maximum load ratings.
